APPLICATION	VERDICT	LAST PASSED TEST	TESTED RECOVERY POINT	VERIFIED LAYERS	PASS RATE	TEST DURATION	SCHEDULE
family-photos Generic file recovery	Ready Recently restored and verified.	2026-10-14 19:47 UTC 0 h ago	2026-10-14 19:46 UTC 7199e59803ec	**Recovery point** · **Backup data**	1/1	0.0 min	manual
home-assistant Home Assistant configuration directory	Untested No recovery test has run yet.	—	—	Recovery point · Backup data	—	—	manual
vaultwarden Vaultwarden data directory (SQLite) + optional app start	Not ready No recovery test has ever passed. ✗ jwt-signing-key: rsa_key.pem is missing ✗ sqlite_integrity:db.sqlite3: database file db.sqlite3 is missing from the restore ✗ has-users: database file db.sqlite3 is missing from the restore *Next step: This path is not in the restored snapshot. Either the backup job does not include it, or basePath does not match how the backup was taken (the run page shows where similarly named files were found). Inspect the snapshot with `restic ls <snapshot>`.*	—	—	Recovery point · Backup data · Database	0/1	—	manual

Each passed test restored the stated recovery point into an isolated environment and passed the checks in the application's versioned test definition. Bold layers were verified in the last passing test; grey layers are configured but were not verified by it. A passing test is evidence of recoverability under the tested conditions, not a guarantee of future recovery. Measured test duration is an indicator for RTO planning only.
